Overview

- **Backend** Software Engineer with **5+ years** of experience building and scaling global Payment systems for **65M+ daily payments**.
- Led end-to-end delivery of multiple payment features from gathering requirements, design, implementation, testing and rollout.
- Managed daily cross-functional collaboration with Engineering, Product, Operations and Data Science across teams and orgs.

Work Experience

Uber

Amsterdam, Netherlands

Senior Software Engineer — *Jul 2022 - current*

- **Context:** My team provides the platform [*article*] that enables Uber's businesses integrate 200+ payment methods across 100+ countries, processing **65M+** payments/day for a total of **$250B+**/year. My focus is reducing payment friction, increasing conversion, and enabling new payment methods and flows.
- **Led end-to-end**, **designed**, **implemented** or contributed directly to **20+ payment features**, including:
  - Enabled booking of rides from airport and hotel kiosks [*article*], adding 20k/day new trips and generating 750M$+ in annual bookings.
  - Reuse existing payment authorization for order or trip updates, avoiding duplicate temporary charges to the user; unblocked 15+ downstream initiatives and a combined 460M$/year in reduced failed-payment costs.
  - Migrated pre-checkout payment authorization logic (e.g. 3D Secure, biometric confirmation) from mobile/web clients to backend services, enabling new payment flows for 500k+ monthly users generating 150M$/year in incremental bookings.
  - Centralized payment-plan calculation (e.g. splitting a charge across card, voucher and credits) into a single backend service, improving fraud-detection accuracy on 15M payments/day, solving 18 different fraud cases for 10M$/year and unlocking new payment flows.
  - Enabled switching payment method mid-trip, unlocking 2.5M$/month in bookings for 800k previously-ineligible monthly users.
  - Enabled paying for a trip plus any outstanding balance in 1-click, increasing arrears collection for a total of 65M$/year.
- Led, designed, implemented and contributed directly to **re-design and migrations initiatives**, including:
  - Redesigned the checkout-fraud-payment architecture unblocking 30+ company initiatives for a combined 400M$/year.
  - System redesign initiatives to simplify backend architectures, resulted in 1.5M$/year cost savings and reduced of development time
  - Led several refactoring initiatives to reduce tech debt, increased E2E test coverage, improve observability and reliability.
- Contributed to several company wide initiatives (Multi-Store ordering [*link*], Metro Ticketing on Uber [*link*], Uber For Business [*link*], fraud prevention, payment recovery, compliance) collectively worth an estimated 850M$+ in incremental bookings and fraud prevention.
- Participated in on-call rotation 24/7 once a month, involved in 30+ incidents resolutions and supporting engineering stakeholders daily.
- **Leadership** and **Mentoring**:
  - Serve as subject-matter expert and escalation point for two core domains; authored 100+ technical design docs, reviewed 200+ design docs and 2,500+ code changes from peers.
  - Formally mentored 4+ engineers from intern to mid level promotions.
- **Additional contributions**:
  - Interviewed 100+ candidates since 2024 for internship-to-senior level positions for Coding and Design.
  - Early career programs: mentor and technical interviewer for *Uber Career Prep* program. Restructured 2026 interns interview process.
- Working with: Go, Java, SQL, Python, Kafka, proto, thrift

Amazon Web Services

Berlin, Germany

Software Engineer Intern — *Mar 2022 - Jun 2022*

- Improved alerting, observability and reliability of machine learning pipelines, resulting in reduction of false alerts by 90%.
- Designed and implemented ML models and pipelines for a recommender system that places advertisements inside Amazon Prime Videos.
- Working with: Python, Pytorch, flask, GO, Java, Kotlin, AWS, SQS, S3, Sagemaker, EC2

Education

University of Padova

Padua, Italy

MSc in Computer Engineering — *current*

*Still enrolled, working on final thesis.

BSc in Computer Engineering — *2019*

Extra

Nova Talent

Member

- **By-invitation-only** network for the **top 3% of worldwide talent**. Connects members with exclusive collaborations and activities. [***link***]

Superhero Valley

Head & Strategic Advisor

- No-Profit. Exclusive Tech network that helps **Italy** top college students launch their careers into top-tier academia and industry. [***link***]
